

To be always in line with the continuous evolutions in the market, *Smipack* has also updated the *GHR* range and introduced a new model for the *GHL* series.

The two pre-existing models *GHR 280R* (for the automatic grouping of the products) and *GHR 280ST* (for the automatic grouping and stacking of rigid products) have been greatly improved with regard to the accessibility by the operator during the format changeover and maintenance.

A new model of jogger belt has also been created, *GHL 400*, ideal for the alignment of flanked, grouped and stacked products. This device was previously available integrated in the special versions of tunnels (*T450-T452*); now the separate management makes it suitable to be used with all the tunnels of the *FP-HS* series.

Visiting our website <http://www.smipack.it/> you can find the sections [products](#) and [media center](#) already updated with videos, catalogues and photos.

This important investment in the range of conveyors has led to price changes, so we kindly ask you to contact our sales department.

***Best regards***
