

Shrink wrappers offer a range of eco and cost saving benefits

SMI Group launched the latest unit in the CSK Ergon series of shrink wrappers; the CSK50F that was packing 500ml PET bottles into a 4 x 3 film only format.

Designed to be ergonomic, energy efficient and easy to use, the compact structure of the machine series simplifies general operations such as cleaning and maintenance as well as saving space on a line. Several models are available but all are designed to pack a wide range of containers in an economic way.

With output speeds of up to 50 packs per minute – depending on product size and format – the series offers pack formats that include shrink film only; pad plus shrink film and tray plus shrink film.

500ml PET bottles were used

The new motors are supported by an integrated digital servo drive which simplifies the machine wiring. This, says the company, guarantees energy efficiency, reduces noise and has less wear on machine parts.

For operator convenience, the HMI control panel slides the full length of the machine while its tactile screen includes advanced diagnostic functions offering live remote support. Meanwhile, the compact knife unit design is managed by a direct drive brushless motor.
