

The new versions of the automatic L-Sealers FP6000/CS INOX will be equipped as standard supply with a removable infeed conveyor which allows an easy cleaning of the parts that come into contact with food packaged with our machines.

This important "upgrade" goes to the direction of responding positively to your customer's requests for the packaging of products such as meat, fish, cheese vegetables, fruit, pizza that require an accurate cleaning of the machine infeed.

For further technical info and price request for already installed machines please contact our sales office.

Best regards
