

From processing to packing and packaging technologies, from ingredients to food safety and quality management up to logistics and handling: *Anuga FoodTec* trade show is much more than this. For SMI that is the opportunity to present the **new ERGON series** of primary and secondary packaging machines.

*Ergonomics, technology, robustness, modularity, etc.* these are only some of the elements featuring the new **ERGON series**. The presentation of the **SK 500 F ERGON** in Cologne is just a taste of what the new range of machines will be, with the launch of which SMI wants to mark another important date in its history.

**New line, new colour, new benefits** matching the advanced technology content that since forever has been distinguishing SMI packers. Here are the main innovations of the **ERGON line**:

- **New "rounded" design**, which allows to house all motors in an outer position in respect to the mechanical groups they move, thus facilitating the line operator's access in case of maintenance interventions.
- **Door-closing system** equipped with a slow-down hydraulic device that decelerates the safety doors sliding in the last leg of their ride and allows them to close smoothly.
- **Stainless steel frame**, the ideal solution to fulfill the food industry needs.
- **Absence of motoreducers**: SMI packers are driven by brushless motors directly connected to the drive shafts, with the advantage of reducing energy consumption, noise and maintenance.
- **Heat-shrinking tunnel** featuring advanced technical solutions that enable energy consumption reduction, maximum environmental compatibility and the improvement of the pack quality.

We look forward to meeting you at our **stand D50/E69 - Hall 7 at Anuga FooTec** and to showing you the new **ERGON** line of packaging machines.

Warmest regards.
