

SMI PRESENTS THE NEW

ERGON SERIES OF PACKERS

NÜRNBERG MESSE

What is the best venue for SMI to present the new **ERGON series** of secondary packaging machines?
Brau Beviale, of course.

In Nuremberg we will be showcasing the new **SK 800P ERGON** shrinkwrapper equipped with the optional device to work in dual lane.

This new packaging machine series by SMI is the outcome of a two-year R&D project that led to **a lot of innovations** in terms of automation technology, ergonomics, robustness and modularity.

Just to mention a few technical improvements of the new ERGON packer exhibited at Brau:

- **new rounded design:** the safety doors are rounded and are equipped with a slow down hydraulic system made of a damper. This solution prevents the operators from any hazard related to doors closing, and helps protecting the machine frame from impacts
- **easy-access energy saving motors:** thanks to the new design, all of machine motors have been located in a more accessible position, from the very inside of the packaging process devices to their external frames, to enable easy maintenance operations or spare parts replacement
- **threaded bars protections:** all of the changeover format bars are embedded in an extruded metal structure, preventing any deposit of product or dirt, thus avoiding the bars to malfunction
- **motorized film reel:** each reel is equipped with a brushless motor to control the unwind of the film to enhance the unwinding precision
- **heavy-duty tensioning system:** controlled through a piston, it has longer endurance than spring-based solutions.

We look forward to meeting you at our **Brau Beviale's stand 503/Hall 7A** and to showing you the many more benefits of the new **ERGON** line of packaging machines.

Thank you for your attention.

Warmest regards.
