

The above mentioned optional is the ideal solution if you have to “handle” products with running side between 60 and 90 mm that the traditional upper belts can not guide.

Besides the traditional products, boxes, tetrapack with narrow running side, the use of a soft rubber on the surface of these belts, now allows the employment even with soft products (e.g. sacks of flour, sugar etc).

The belts are adjustable both in height and width and they must be offered as an alternative to the upper belts of the standard version.

To see the operation of the a.m. optional please see the next [link](#).

For further info please contact our sales department.

Best regards
