

All4pack exhibition in **Paris from 14th to 17th November 2016** is a must to discover the latest packaging solutions, such as the new **CSK 50 F ERGON** exhibited by SMI.

The new **CSK ERGON** series offers several models in single and dual lane, with output speeds up to 50+50 ppm (depending on product size & format) in shrink-film only, pad + shrink-film and tray + shrink-film (according to the selected model).

The machine **CSK 50 F ERGON** on display will be packing 1 L PET bottle of milk in 3x2 film only format with output speeds up to 50 packs/minute in single lane.

The new CSK ERGON incorporates innovation and the latest technology:

- **Compact, ergonomic and functional frame**, simplifying general operations such as cleaning and maintenance and ensuring space saving within the packaging line;
- **The new ICOS motors are supported by an integrated digital servo drive**: an innovative solution which simplifies the machine wiring, guaranteeing energy efficiency, reduced noise and less wear on machine parts;
- **The Posyc HMI control panel, sliding the full length** of the machine, is user-friendly;
- **Machine guards have a curved design** to enable the external mounting of the motors to the mechanical groups, facilitating easy access for maintenance interventions;
- **The compact knife unit design** is managed by a direct-drive brushless motor; this refines the accuracy during the film cutting and simplifies the maintenance operations

Visit our **booth 6J039** at All4pack exhibition, in order to discover the latest innovations within SMI ERGON product range.
