

Smipack has made a deep restyling of the range *GH* and has introduced new models for the *GHS* range to better meet the needs of the market.

The historical *GH* range of conveyors for the *FP* automatic L-sealers has been restyled but no new models have been introduced, therefore they remain [GH1000/400](#), [GH2000/400](#), [GH2000/600](#).

For the *GHS* range, in addition to the important restyling of the [GHS2000/400B](#), [GHS2000/400F](#), [GHS2000/400R](#) models, already detailed in a previous newsletter, the principal novelty will focus on the introduction of the [GHS2000/700B](#) and *R* models which will replace the [GHS2000/600B](#) and *R*. Furthermore other 2 new models will be available soon:

- [GHS2000/400S](#): cadence and feeder conveyor with mat and servo motors, ideal for fully automatic lines.
- [GHS2000/400P](#): conveyor for cadenced load by vanes, ideal for loading of grouped products.

Visiting our website <http://www.smipack.it/> you can find the sections [products](#) and [media center](#) already updated with videos, catalogues and photos.

This important investment in the range of conveyors has led to price changes, so we kindly ask you to contact our sales department.

Best regards
