

**XP650 ALX-T
THE NEW SOLUTION
FOR PACKAGING IN
TRAY + FILM
WITH IN-LINE INFEED**

The *XP* series of overlap shrinkwrappers has been enriched with a new model that, besides representing features and benefits of this range, guarantees the automatic formation of the tray under the products before their wrapping with film.

The cardboard blank is picked by a pneumatic picker and transported to the tray formation area by a step motorized chain controlled by inverter and encoder. Once inserted the cardboard under the products the front and rear flaps are folded mechanically, hot melt glue is sprayed on the side flaps that are then folded by a pneumatic device. After their shaping, the trays with products move to the film wrapping zone and then flow into the shrinking tunnel.

Extremely compact, the *XP650 ALX-T* is the ideal model for the in-line packaging of round products, being standard equipped with electromechanical sorter, or of rectangular, square or oval products with the addition of the *DV200* divider.

The production capacity can reach up to *25 packs/minute*.

The new models can handle trays from 500 x 320 mm maximum up to 150 x 60 mm minimum, with tray flaps ranging from 30 to 80 mm. Additionally, with the appropriate optionals, these shrinkwrappers can also pack the products in *only film* or *pad + film*.
