

The new PET container, designed by SMI to bottle mineral water, combines all advantages offered by the ductile flexible PET material with a strong appeal design.

The basic theme chosen for the new bottle is **crystal**, which symbolises how precious, pure, limpid and transparent the water it contains is.

While waiting for the election of the winner of the [World Beverage Innovation Awards](#), contact our Sales Department and discover the container suitable for your requirements.

We'll wait for you at Drinktec to show you our ECOBLOC® ERGON integrated system, the compact solution for producing, bottling and capping **PET containers... even those with very original shapes.**
